

# Environmental Management Systems Training Course

## Environmental Management Systems (ISO 14001:2004)

### Training Course Program

This 2 day course adds discipline to environmental management focus by equipping participants with the skills and knowledge to ensure ongoing environmental system compliance and effectiveness.

### Who should attend

This two day training course will benefit auditors, managers, supervisors and others who are responsible for developing and implementing or auditing environmental management systems. Participants may come from any industry or sector as the underlying principles of environmental systems apply across all areas.

### Course Content

- Organisational commitment to Environmental Management Systems (EMS)
- Legal requirements
- Environmental aspects and impacts
- Risk assessment
- Establishing control measures
- Setting objectives, targets and performance measures
- Documentation and records
- Monitoring and measuring
- Internal audit
- Non-conformity, preventive and corrective action
- Management Review
- Implementing an EMS

### Learning Outcomes

At the conclusion of this programme, participants will be able to...

- identify the environmental management system requirements and principles then apply these requirements to an organisation.
- undertake performance improvement of the environmental system

### Course Outcomes

On completion of the course participants will be issued with a Certificate of Attendance in Environmental Management Systems

Assessment for this course can also be conducted. On successful completion, participants will be issued with a **Certificate of Attainment** in:

**RABQSA – EM Environmental Management Systems**
